**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 23 October 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Dodge (US 4,608,086).

Dodge teaches compositions for removing membranes (see abstract). Dodge teaches the membranes to be made from various resin coatings (see col. 1, lines 35-58). Dodge teaches the use of pH adjusting agents including hydrochloric acid (see col. 1, lines 65-68). Dodge teaches

Art Unit: 1751

the use of solvents including ethylene glycol monobutyl ether (see col. 2, line 1) and acidic agents including hydroxyacetic acid (see col. 2, lines 1-6).

Dodge teaches in table I various compositions suitable for their invention and includes compositions containing the applicant's claimed solvent ranges, water ranges and pH adjusting ranges.

Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Doyel et al (US 5,962,383).

Doyel teaches cleaning compositions for removing resin (see title). Doyel teaches in claim 1 that the compositions contain water, glycol ethers, buffers, and hydroxides.

Doyel teaches in claim 19 the specific claimed glycol ethers. Doyel teaches in claim 25 the inclusion of various pH adjusting agents including acetic acid, citric acid, ammonium acetate.

Doyel teaches various alkaline pH adjusting agents suitable for their invention including sodium hydroxide and potassium hydroxide (see col. 8, lines 6-23).

Doyel teaches various compositions containing various ranges of these solvents, pH adjusting agents and water. Concerning the alcohol components and the applicant's claimed solvent range, Doyel teaches compositions containing 27.5%, 35%, 40%, 84% solvent (see examples 24-37). Concerning the pH adjusting agents, Doyel teaches various amounts including 1%, sodium hydroxide (see example 24). Concerning the water, Doyel teaches various amounts of water including 10%, 20%, 25%, and 68.7%.

Art Unit: 1751

***Conclusion***

Although no claims have been found to be allowable, it should be noted that the applicant's specific exemplified use of the ammonium diacetate was uncommon in the art of removing various coatings.
